

To whom it may concern:

Álvaro Cabrero completed his Final Degree Project at Vicomtech, as a Software Engineering student at the University of Oviedo, in the second semester of the academic year 2020/2021. The result and his contribution were so positive that we decided to incorporate him to the team and he became a researcher in the Digital Media & Communications department of Vicomtech from September 2021 to September 2022.

Álvaro became part of the Interactive Media Technologies research line in an extraordinary way, contributing to software development in immersive environments and eXtended Reality (XR). He stood out for his ability to develop software in immersive Web environments and using engines such as Unity.

Among others, he participated in the ARETE¹ research project, in which Augmented Reality applications were developed to foster multi-user collaboration of students in an eLearning environment; and in the 5G-EUSKADI² project, in which he made relevant contributions to the use case led by Iberdrola related to remote assistance through Augmented Reality in an energy scenario.

From the very first moment, Álvaro perfectly understood the objectives of the challenges that were posed to him, and he collaborated very well with a multi-disciplinary team. He is very hard-working, very responsible with his tasks, and cooperative, always looking for the best with respect to the objectives of the group and the project.

He is detail-oriented and thorough in his work. He demonstrates intelligence and creativity in finding imaginative solutions to problems and is effective in implementing solutions. He is not particularly communicative but is honest, sincere, transparent, disciplined, and communicates relevant issues clearly and effectively.

Unfortunately for Vicomtech, Álvaro decided to continue his education and specialise in a professional environment related to videogames, so he did not continue his work at Vicomtech. However, I remain at the disposal of anyone who needs it to provide further information about Álvaro, and I wish him the best of luck in his professional career, as I consider him to be a person with very good skills and a very good attitude and motivation.
